

EditPlus 3

By Miki

Feedback: <http://fonline.ru/forum/showthread.php?t=20680>

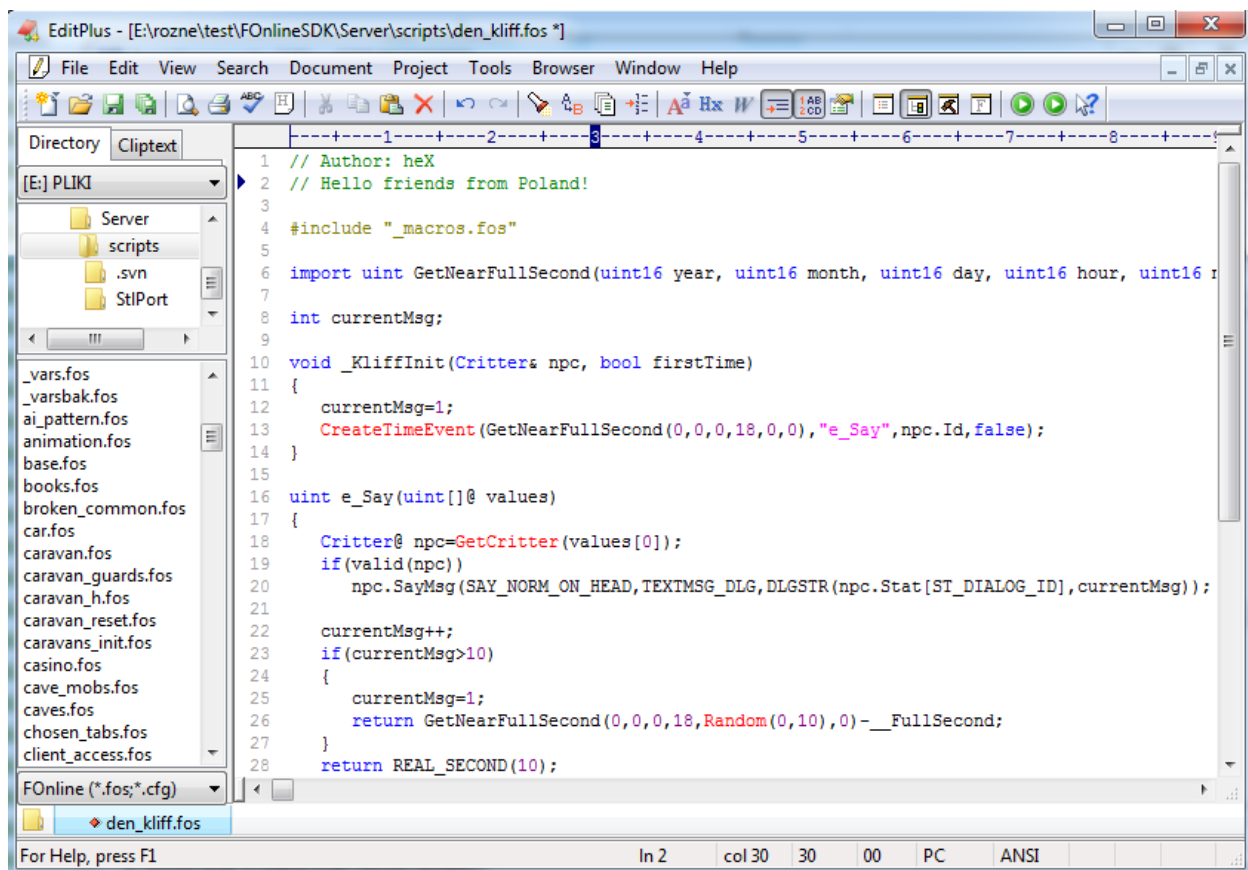

EditPlus is a text editor, HTML editor, PHP editor, Java editor and Hex Viewer for Windows. While it can serve as a good **Notepad replacement**, it also offers many powerful features for Web page authors and programmers.

Quick Instalation for smart:

1. **Document->Pernament Settings -> Settings & Syntax->Add;**
2. Write "AngelScript" or smothing;
3. Syntax File: choose **fos.stx**;
4. Go to **SyntaxColors** and modify colors(my settings on screen).

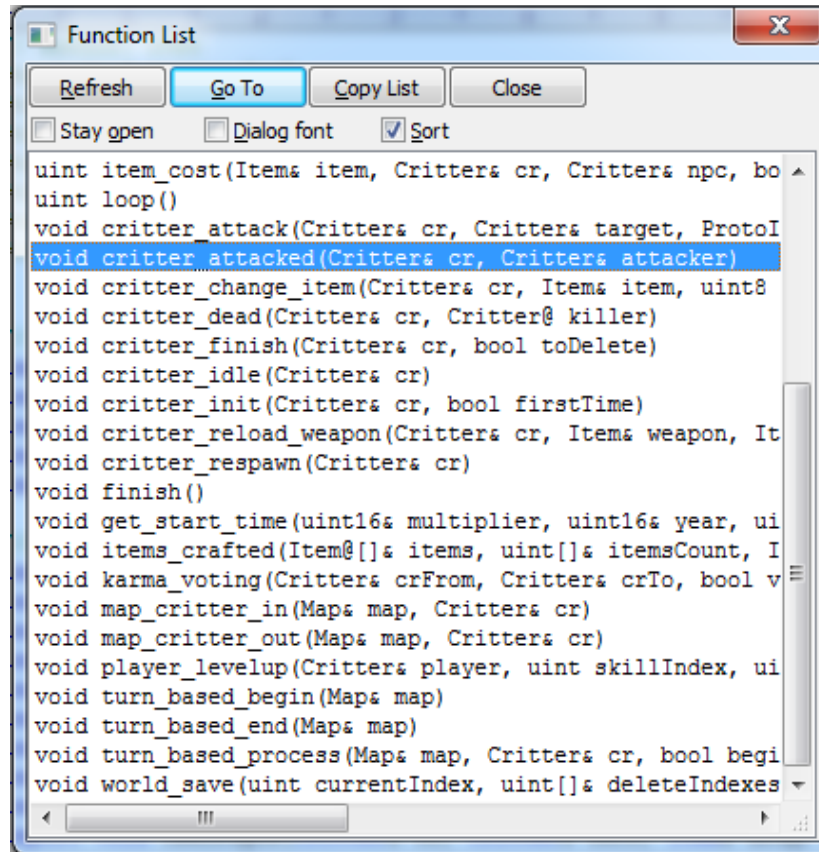

What you can get?

1. Open .fos files in EditPlus by default!

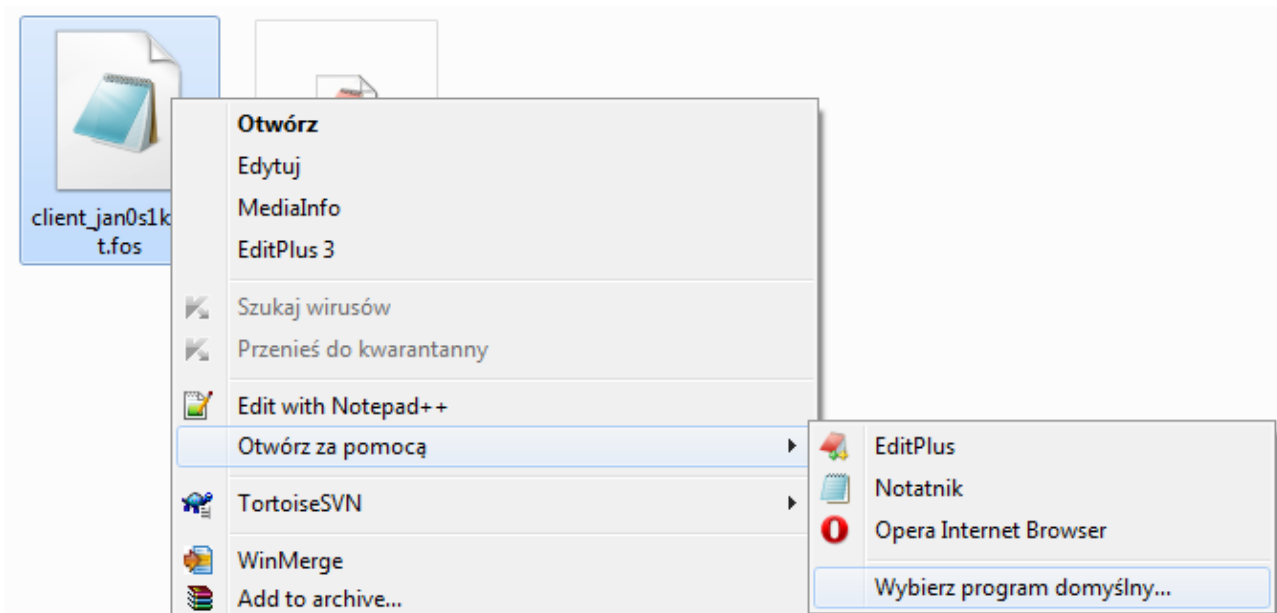

Syntax highlighting for AngelScripts, and Fonline API functions!

2. Syntax highlighting for AngelScripts, and Fonline API functions!
3. Detect Functions in module!

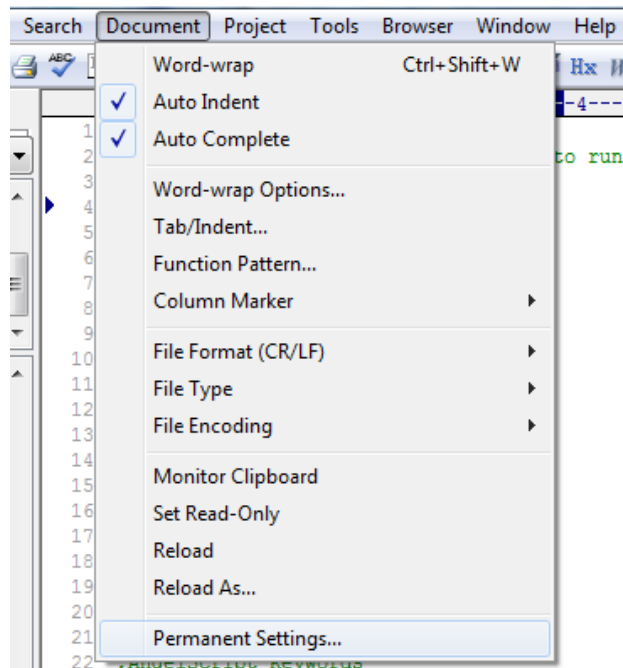

*Function List, you can move to function, by double click! Specially usefull in big files like main.fos! **ctrl+F11***

Detailed instruction

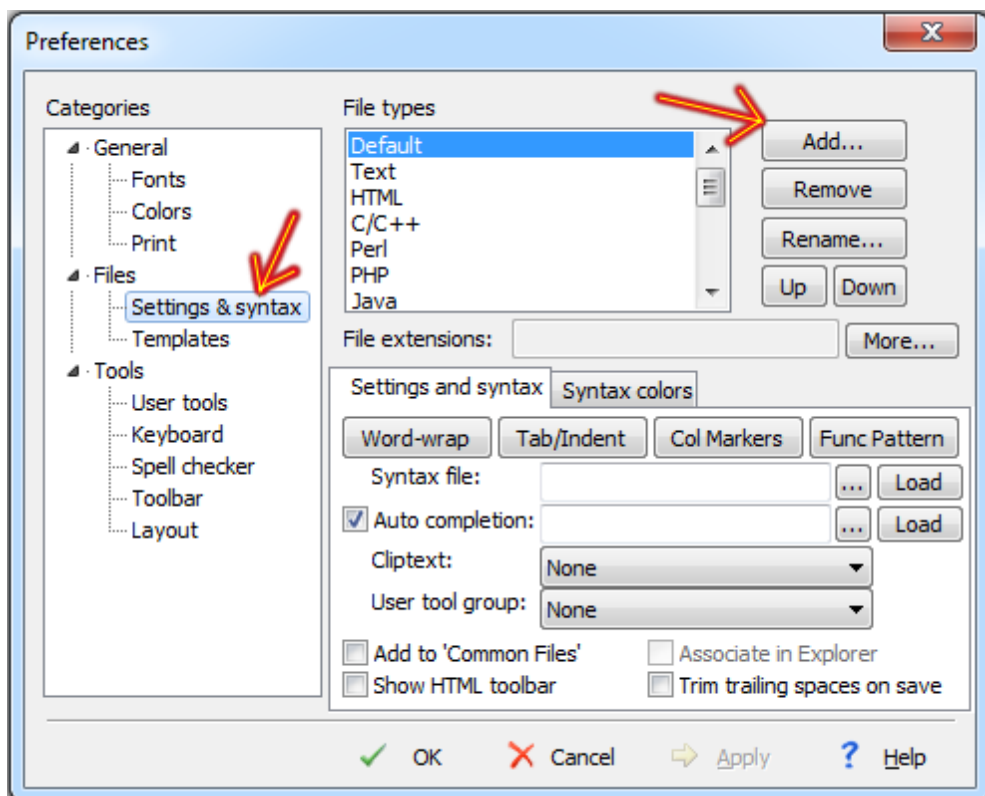

Shift + Right click on .fos file, Open as → Choose default program (or something like that, I don't have english windows)

1. Run **EditPlus 3**

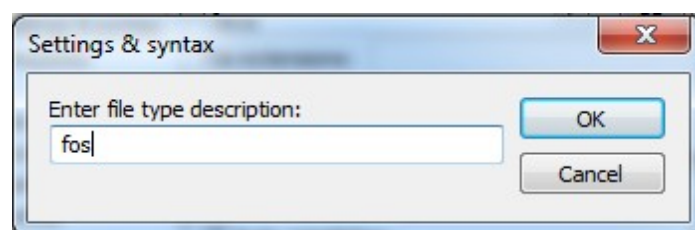

2. **Document** → **Permanent Settings**

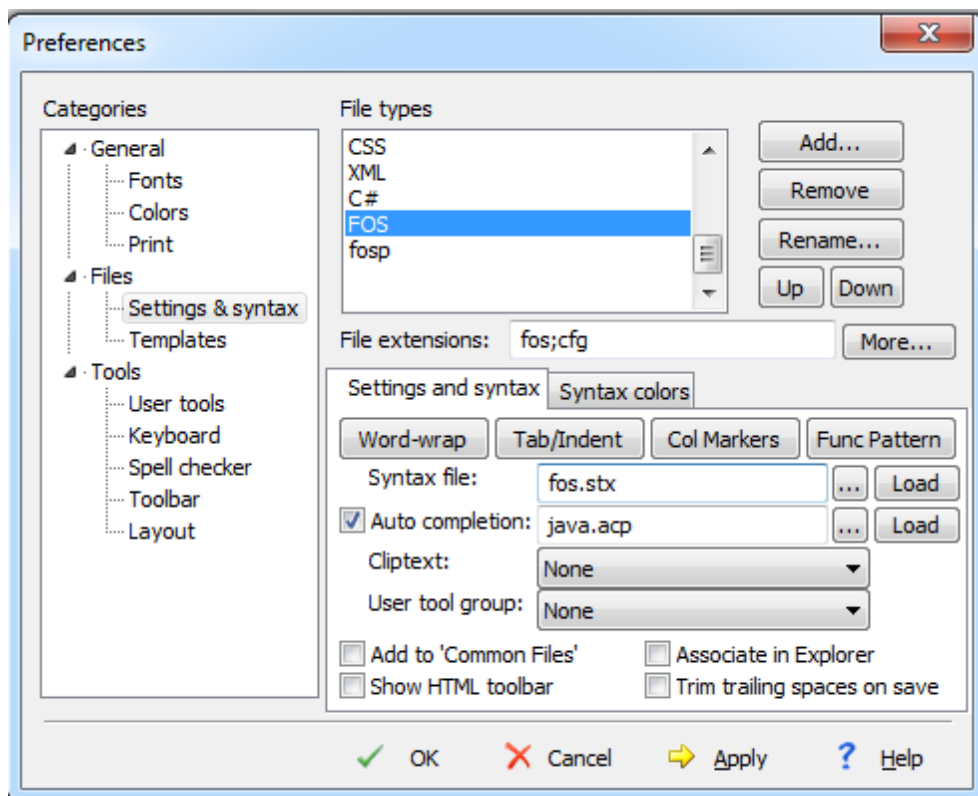

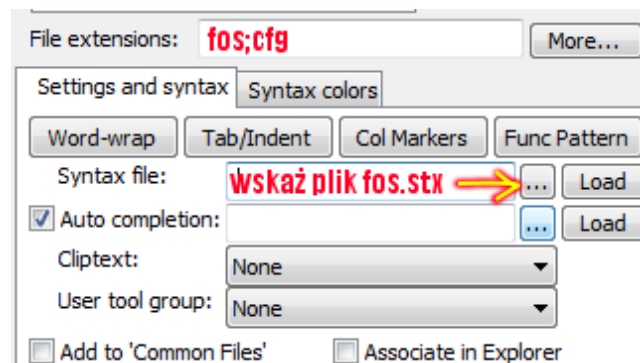

3. Click **Add...** Button

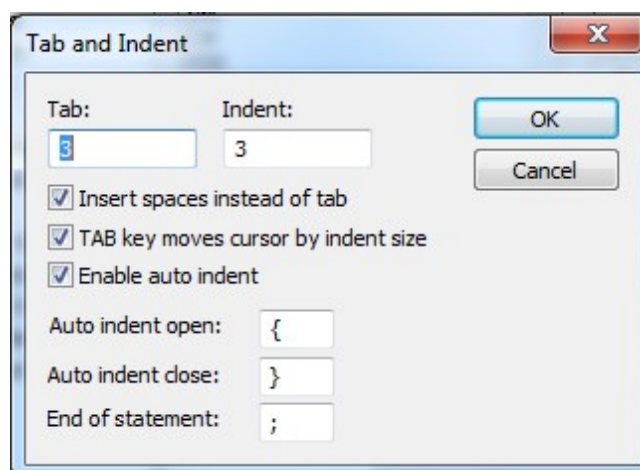

4. Enter File Type Description. For example: „fos”, „Fonline”, „Foscripts” etc.

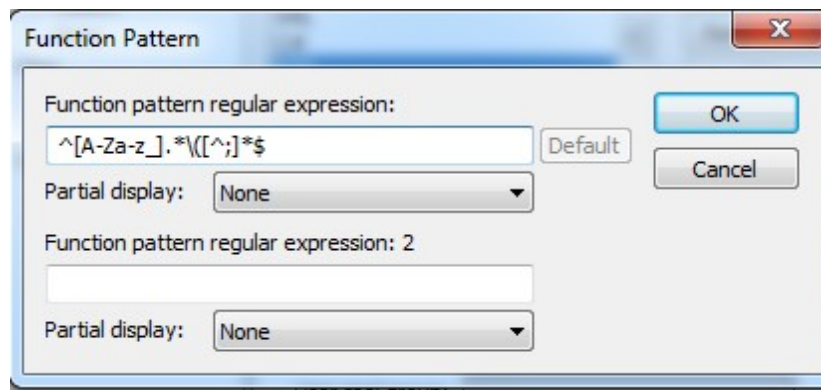

5. Write **File extentions: fos**, and choose **fos.stx** in **Syntax file**

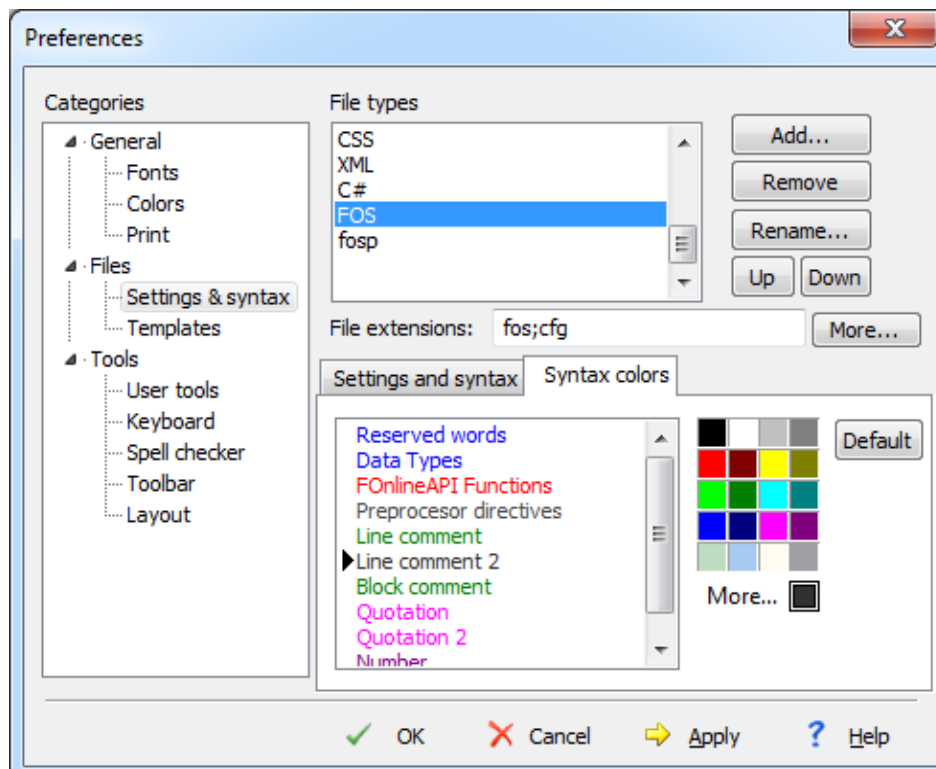

6. Click button "**Tab and Indent**" and do all as on image

7. Click button "**Func Pattern**" and do all as on image(copy-paste: `^[A-Za-z_].*\[^\;]*$`):

8. Go to „Syntax colors” and set colors that you like:

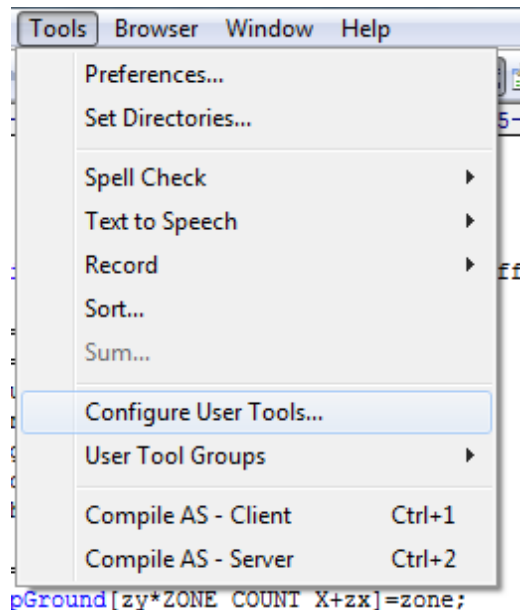

Line comment 2 is for #(preprocessor)

9. Apply & OK – now you have Syntax higlighting in fos files, and you can see **functions list** by clicking **ctrl+F11**

How Integrate EditPlus 3 with ASCompiler.exe

1. Tools -> Configure User Tools:

2. Add Tool >> Program

3. In „Menu Text” write name for new tool for compiling Client Scripts, for example: „ASCompiler Client”

4. In **Command** write path to **ASCompiler.exe**, you find this program in SDK directory \Tools\ASCompiler\

In my case: E:\rozne\test\FOnlineSDK\Tools\ASCompiler\ASCompiler.exe

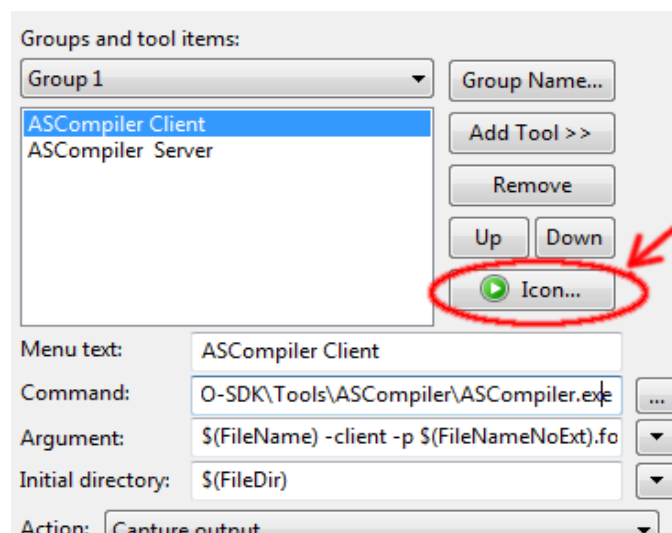

5. In Argument paste:

```
$(FileName) -client -p $(FileNameNoExt).fosp
```

6. In Initial Directory paste:

```
$(FileDir)
```

7. Set options, as on image, and choose icon:

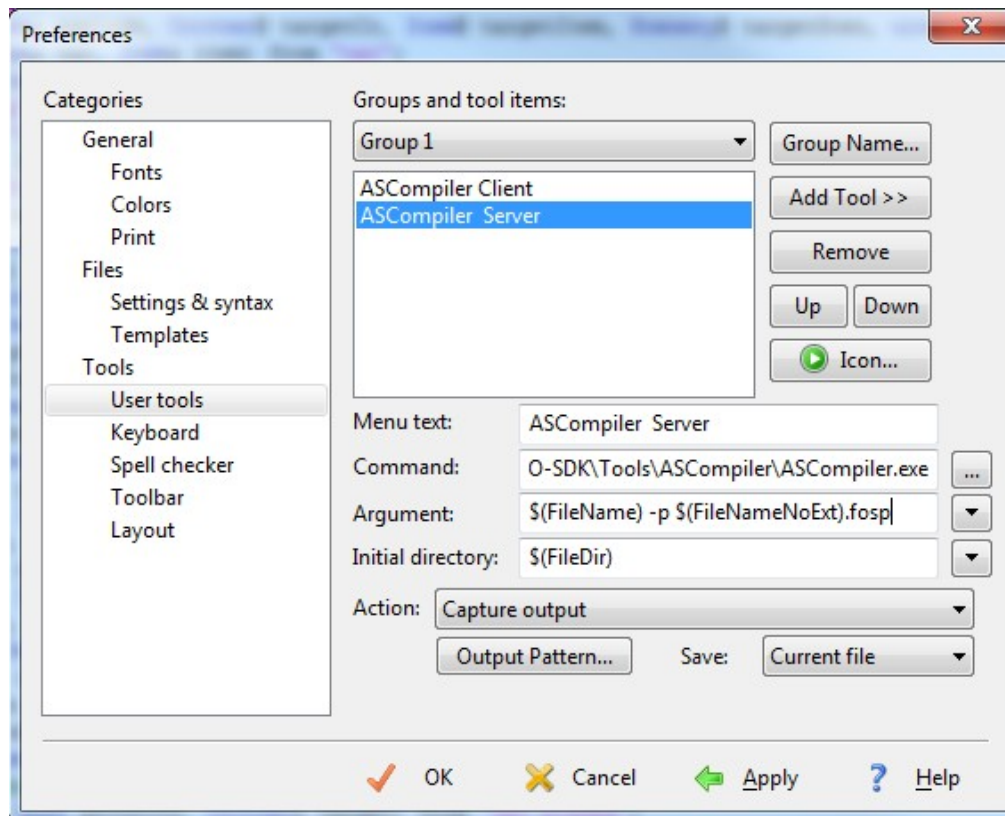

8. The same way, add toolbar for compile server scripts, only differences are

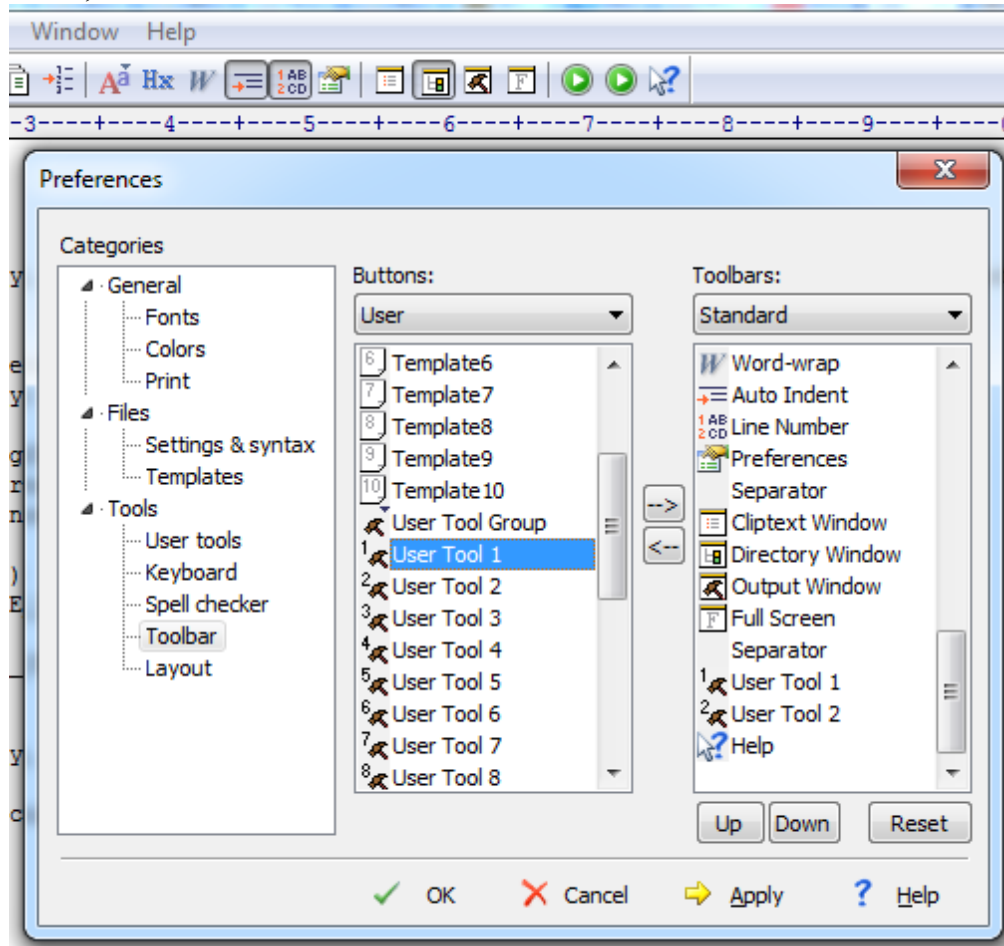

Menu text: ASCompiler Server

Argument:

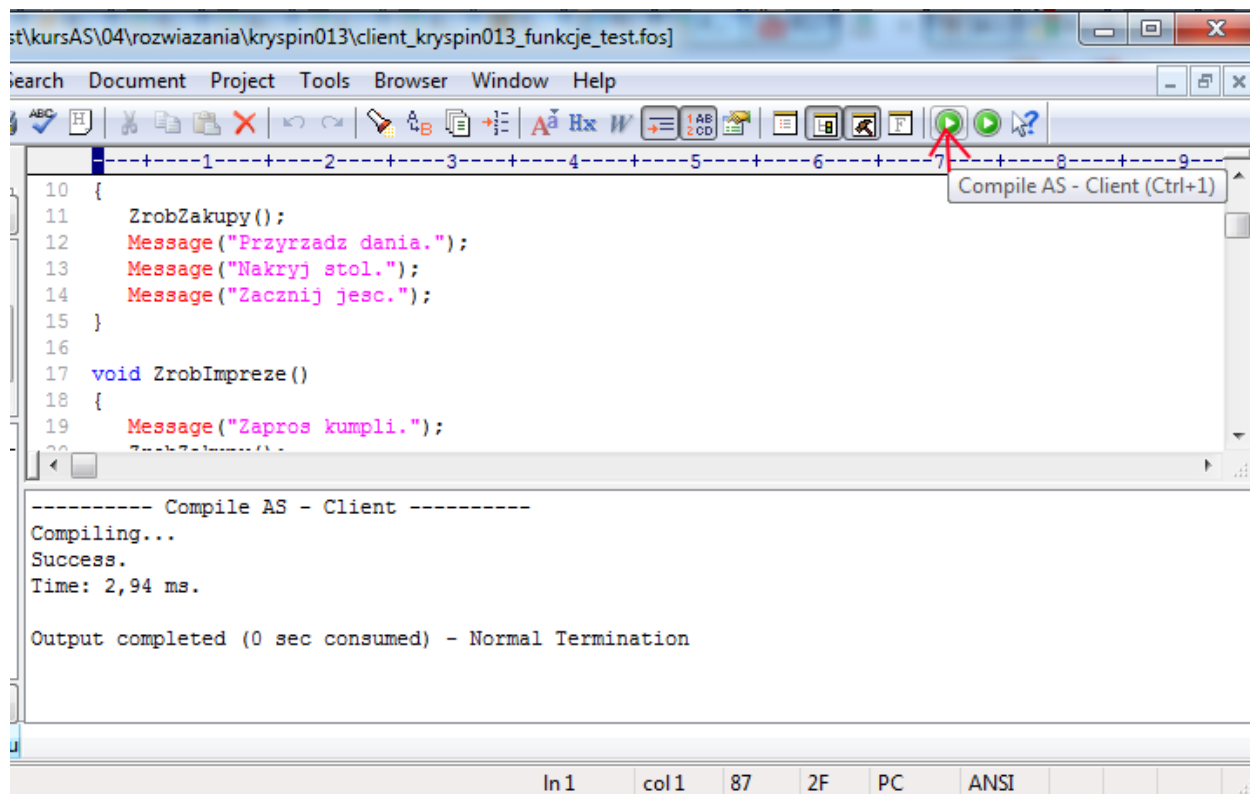

`$(FileName) -p $(FileNameNoExt).fosp`

9. Go to **Toolbar**, in **Buttons** chose **User** and add **User Tool 1** and **User Toll 2**:

Effect:

The screenshot shows the EditPlus3 IDE with a file named `st\kursAS\04\rozwiązania\kryspin013\client_kryspin013_funkcje_test.fos`. The editor contains the following code:

```
10 {
11     ZrobZakupy();
12     Message("Przyrządź dania.");
13     Message("Nakryj stol.");
14     Message("Zacznij jesc.");
15 }
16
17 void ZrobImpreze()
18 {
19     Message("Zapros kumpli.");
20 }
```

The toolbar at the top right has a green play button icon highlighted with a red arrow. A tooltip for this icon reads "Compile AS - Client (Ctrl+1)".

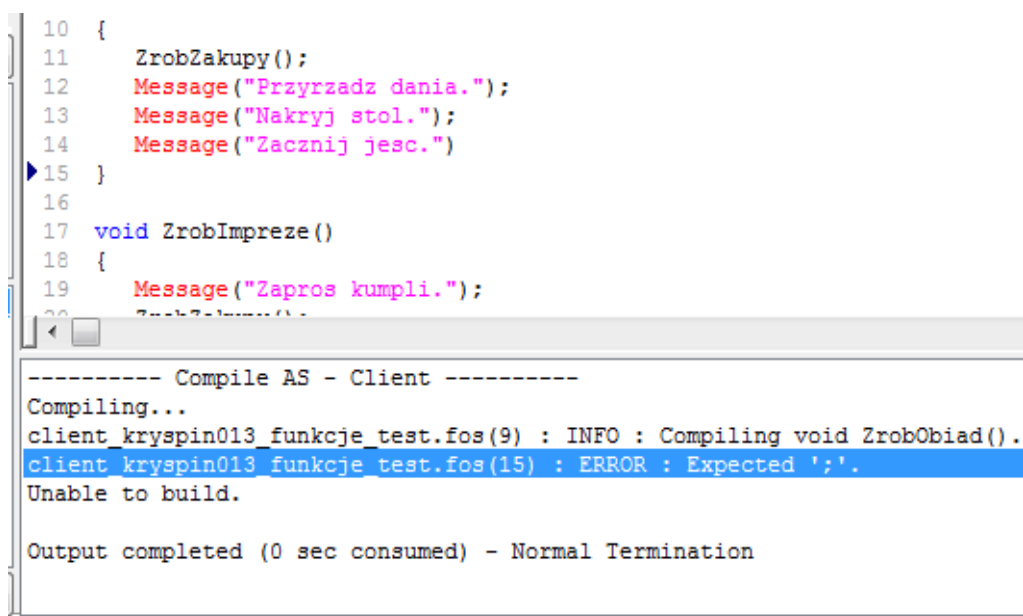

The output window at the bottom shows the following text:

```
----- Compile AS - Client -----
Compiling...
Success.
Time: 2,94 ms.

Output completed (0 sec consumed) - Normal Termination
```

The status bar at the bottom indicates the cursor is at line 1, column 1, with 87 characters on the line, in 2F PC ANSI mode.

You can test scripts file in EditPlus3, without restart server, and see the output!

The screenshot shows the same EditPlus3 IDE with the same code as the previous screenshot. The output window shows the following text:

```
----- Compile AS - Client -----
Compiling...
client_kryspin013_funkcje_test.fos(9) : INFO : Compiling void ZrobObiad().
client_kryspin013_funkcje_test.fos(15) : ERROR : Expected ';'.
Unable to build.

Output completed (0 sec consumed) - Normal Termination
```

The error message "client_kryspin013_funkcje_test.fos(15) : ERROR : Expected ';'." is highlighted in blue.

Error? No problem!

Thank you for reading. See my Fonline mods, that I write in EditPlus 3!

Want cinematic adventure? See Start location select screen!
